

Interface Aesthetics

Yu Jung Jung

https://motherfuckingwebsite.com/

This is a motherfucking website.

And it's fucking perfect.

Seriously, what the fuck else do you want?

You probably build websites and think your shit is special. You think your 13 megabyte parallax-ative home page is going to get you some fucking Awwward banner you can glue to the top corner of your site. You think you're a boner because it finally has box-shadow. Wrong, motherfucker. Let me describe your perfect-ass website:

- Shit's lightweight and loads fast
- Fits on all your shitty screens
- Looks the same in all your shitty browsers
- The motherfucker's accessible to every asshole that visits your site
- Shit's legible and gets your fucking point across (if you had one instead of just 5mb pics of hipsters drinking coffee)

Well guess what, motherfucker:

You. Are. Over-designing. Look at this shit. It's a motherfucking website. Why the fuck do you need to animate a fucking trendy-ass banner flag when I hover over that useless piece of shit? You spent hours on it and now you're a motherfucker jabbing at it on their iPad with fat sausage fingers will never see that shit. Not to mention blind people will never see that shit, but they don't see any of your shitty shit.

You never knew it, but this is your perfect website. Here's why.

It's fucking lightweight

This entire page weighs less than the gradient-meshed facebook logo on your fucking Wordpress site. Did you seriously load 100kb of jQuery UI just so you could animate the fucking background color of a div? You could say "Hi." at 100px height at the beginning of your site? You piece of shit.

It's responsive

You dumbass. You thought you needed media queries to be responsive, but no. Responsive means that it responds to whatever motherfucking screensize it's viewed on. This site doesn't care if you're on an iMac or a

It fucking works

Look at this shit. You can read it ... that is, if you can read, motherfucker. It makes sense. It has motherfucking hierarchy. It's using HTML5 tags so you and your bitch-ass browser know what the fuck's in this fuck

It has content on the fucking screen. Your site has three bylines and link to your dribbble account, but you spread it over 7 full screens and make me click some bobbing button to show me how cool the jQuery Scro

Cross-browser compatibility? Load this motherfucker in IE6. I fucking dare you.

~~This is a website. Look at it. You've never seen one before.~~

TW80000 · 9 yr. ago

full-stack

This site doesn't care if you're on an iMac or a motherfucking Tamagotchi.

The line that got me.

This is *still* a motherfucking website.

And it's more fucking perfect than the last guy's.

Seriously, it takes minimal fucking effort to improve this shit.

7 fucking declarations.

That's how much CSS it took to turn that [grotesque pile of shit](#) into this easy-to-read masterpiece. It's so fucking simple and it *still* has all the glory of the original perfect-ass website:

- Shit's *still* lightweight and loads fast
- *Still* fits on all your shitty screens
- *Still* looks the same in all your shitty browsers
- The motherfucker's *still* accessible to every asshole that visits your site
- Shit's *still* legible and gets your fucking point across

And guess what, motherfucker:

You never knew it, but it's easy to improve readability on your site. Here's how.

Let it breathe

Look at lines 1 and 2 of some shitty website you're building. Assuming they're not married they probably shouldn't be humping. The defaults are trash -- pick a minimum `line-height: 1.4` for body copy. Headings should be tighter. If you can't see that...piss off.

https://brutalist-web.design/

What is Brutalist Web Design?

The term *brutalism* is often associated with [Brutalist Architecture](#), however it can apply to other forms of construction, such as web design. This website explains how.

An example of brutalist architecture, DC Engine Company 02's Fire Station [View full-size \(1.1MB\)](#).

The term *brutalism* is derived from the French *béton brut*, meaning “raw concrete”. Although most brutalist buildings are made from concrete, we're more interested in the term *raw*. Concrete brutalist buildings often reflect back the forms used to make them, and their overall design tends to adhere to the concept of [truth to materials](#).

A website's materials aren't HTML tags, CSS, or JavaScript code. Rather, they are its content and the context in which it's consumed. A website is for a visitor, using a browser, running on a computer to read, watch, listen, or perhaps to interact. A website that embraces Brutalist Web Design is raw in its focus on *content*, and prioritization of the website visitor.

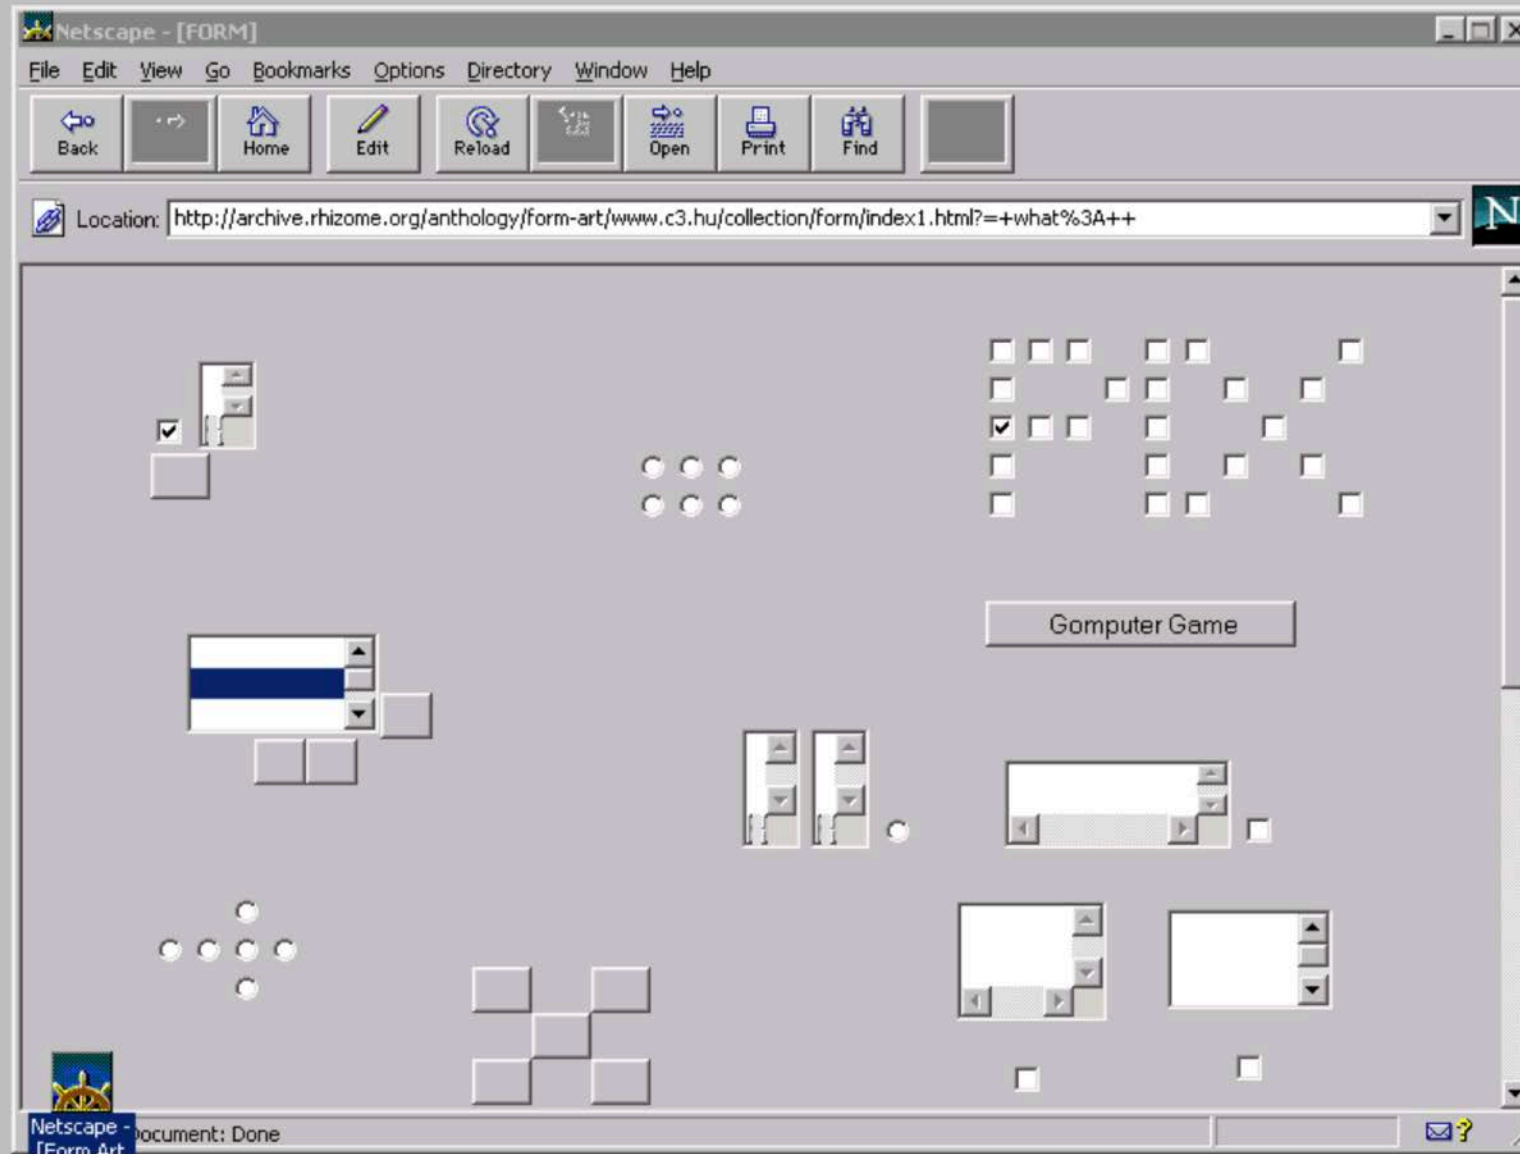

Brutalist Web Design is honest about what a website is and what it *isn't*. A website is not a magazine, though it might have magazine-like articles. A website is not an application, although you might use it to purchase products or

Questions? See the official FAQ.

SERVICE ADVISORY: Users using RSA SSH keys experiencing troubles connecting after Fedora 36 upgrade, you may need to update your client or switch to non-RSA keys.

UPDATE: September 2022:

OS Upgrade to Fedora 36

Fedora 36 has been installed and things should be back to normal. ****NOTE** SSH client requires SHA2 support since SHA1 support is now disabled.**

UPDATE: November 2021:

OS Upgrade to Fedora 35

We have upgraded our OS to Fedora 35. All updates installed without error or any issues. If you encounter any issues please let ben or deepend know. One notable update that may affect your programs is php is now version 8. Please check your php scripts to ensure they still work.

Webmail has also been upgraded as well and we have enabled the ability for our users to use 2-Factor Authentication with it. You can find 2-Factor Authentication inside webmail/settings/security

UPDATE: March 2020:

tilde.club is not a social network it is one tiny totally standard unix computer that people respectfully use together in their shared quest to build awesome web pages

If you would like a list of **RECENTLY CHANGED PAGES** you can see that too

Or Check out the **tilde.club gallery** created by **~tweska**

tilde.club gold star supporters

Tilde.Club is supported by a global community of good people. We don't rank people by the amount they give, only by the fact that they gave. Here's who has donated! When you're on the server, THANK THEM.

NASA and the space

The National Aeronautics and Space Administration (NASA) is the United States government agency responsible for the civilian space program as well as aeronautics and aerospace research.

Project Apollo

Apollo was one of the most expensive American scientific programs ever. It cost more than \$206 billion in present-day US dollars. Finally the Moon landing was made on the Apollo 11 mission and the first person to stand on the Moon was Neil Armstrong.

3 Fun Facts about NASA:

- NASA's goal is to have humans on Mars in the 2030s.
- If NASA launches its rockets eastward they can take advantage of the Earth's rotation.
- The area code for Kennedy Space Center and its surrounding regions is 321
